SUBMARINE BATTERY SPECIALISTS

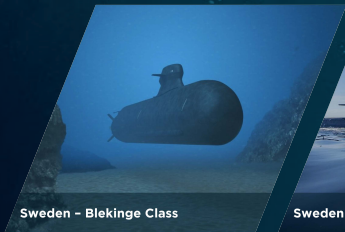

We know that deep below the surface, just minutes of additional battery life can be the difference between mission success and failure. That's why we design and build our submarine battery systems to the highest possible standard. Understanding the submarine domain and our customer needs through close collaboration is key to our success.

Established in 1989, PMB began life with a sole focus on producing the highest quality Main Storage Batteries for the COLLINS Class of submarines.

Today, PMB is a world leading supplier of submarine batteries, supplying world class, sophisticated navies with both traditional and new technology batteries.

PMB has focused on submarine batteries, growing its capabilities in manufacture, in-service support, R&D and engineering with facilities in Adelaide, Australia & Ebbw Vale, Wales.

We specialise in lead acid, nickel zinc and lithium battery system solutions.

Some of the submarine classes serviced by PMB Defence

PMB Defence had been a key supplier to the submarine enterprise in Australia for over 30 years and now operates globally. We maintain certification to Quality, Environment and OHS&W standards, but more importantly strive to continuously improve every aspect of our business with a focus on what is important to the end-users of our systems.

PMB Defence has a unique integrated suite of capabilities dedicated to submarine batteries. These capabilities are supported and shared across PMB resources; our people, partners and facilities.

Research and Development: PMB continues to invest in R&D in order to ensure our customer maintains a superior submarine capability and a growth path for submarine MSB systems.

Engineering: PMB provides battery design experience which is uniquely focused on submarine programs. Our multi-disciplined engineering approach ensures the solutions provided are optimised to meet the user's requirements.

Manufacturing: PMB manufactures both lead acid in Australia and nickel zinc batteries in the UK for several customers. Both facilities are purpose built, state of the art and dedicated to submarine batteries. Quality is the key focus, with an emphasis on continuous improvement, delivering superior quality and performance to our customers.

In-service Support: PMB works closely with our end-users to provide comprehensive in-service support of its products to ensure the best possible performance.

Our purpose-built production, R&D and Engineering facilities are located at the heart of naval shipbuilding in South Australia and in Wales in the UK. These new facilities represent a significant investment in submarine battery capability and capacity that will enable the next generation of systems to provide superior results for our customers.
